LAB. PROGRAMS.

NAME: ANSHUL H. SURA
USN: 1BM19CS020

Week 3 (Lab 1) **LAB-1**

Q-1) Develop a Java Program that prints all real solutions to the quadratic equation $ax^2+bx+c=0$. Read in a, b, c and use the quadratic formula. If the discriminate b^2-4ac is negative, display a message stating that there are no real solutions.

→
```
import java.util.Scanner;
import java.lang.Math;
class quadeqn
{
    public static void main(String args[])
    {   int a,b,c,d;
        double r1, r2;
        Scanner get = new Scanner (System.in);
        System.out.println("Enter three coeffecients
                according to decreasing power
                of x:\n");
        a=get.nextInt();
        b=get.nextInt();
        c=get.nextInt();
        System.out.println("a="+a+" b="+b+" c="+c);
        d=b*b-4*a*c;
        if(d>0)
        { System.out.println("Roots are real and unequal");
          r1=(-b+Math.sqrt(d))/(2*a);
          r2=(-b-Math.sqrt(d))/(2*a);
          System.out.println("\nr1="+r1+" r2="+r2);
        }
        else
        if(d==0)
```

Anshul H Sura

```
{ System.out.println(" Roots are real and equal");
  r1 =(-b)/(2*a);
  System.out.println("\nr = " +r1);
 }
else
 if(d<0)
System.out.println(" Roots are imaginary");
 }
}

LAB-5

[LAB-5]

NAME: ANSHUL H. SURAMA
USN: 1BM19CS020

Q-5) Develop a Java Program to create a class Bank that maintains two kinds of account for its customers, one called the savings account and the other current account. The savings account provides compound interest & withdrawal facilities but no cheque book facilities. The current account provides cheque book facility but no interest. Current account holders should also maintain a minimum balance & if the balance falls below the level, a service charge is imposed. Create a class Account that stores customer name, account number and type of account. From these derive the classes Cur-act and Sav-act to make them more specific to their requirements. Include the necessary methods in order to achieve following task

- Accept deposit from customer & update the balance. • Display the balance. • Compute and deposit interest. • Permit withdrawal & update the balance. • Check for the minimum balance, impose penalty if necessary & update the balance.

[LAB-6]

NAME: ANSHUL H. SURANA
USN: 1BM19CS020

Q-6) Create a package CIE which has two classes - Student and Internals. The class Personal has members like usn, name, sem. The class Internals has an array that stores the internal marks scored in five courses of the current semester of the student. Create another package SEE which has the class External which is derived class of Student. This class has an array that stores the SEE marks scored in five courses of the current semester of the student. Import the two packages in a file that declares the final marks of n students in all five courses

→ Internals

```
package CIE ;
import java.util. Scanner;
public class Internals extends Student
{
    public int cie[] = new int [5];
    Scanner get = new Scanner (System.in);

    public void get()
{ System.out.println (" Enter Details");
  System.out.println (" USN :");
      usn = get.next();
  System.out.println (" NAME :");
  name = get.next()
```

Anshul H. Surana

Scanned by TapScanner

```
System.out.println ("SEMESTER");
    Sem = get.nextInt();
System.out.println ("CIE Marks");
    for (int i=0; i<5; i++)
{ System.out.println ("Subject" (1+i));
    cie [i] = get.nextInt();
}

public void disp()
{ System.out.println ("\n USN :"+usn);
    System.out.println ("NAME :" +name);
    System.out.println ("SEMESTER :"+sem);
    System.out.println ("CIE :");
    for (int i=0; i<5; i++)
{ System.out.println (cie [i]); }
    System.out.println ("SEE:");
}
}
```

Student

```
package CIE;
import java.util.Scanner;

public class Student
{ public String usn, name;
    public int sem;
}
```

Externals.

```
package SEE;
import java.util.Scanner;

Write a program that demonstrates handling of exceptions in inheritance tree. Create a base class called "Father" and derived class called "Son" which extends the base class. In father class, implement a constructor which takes the age and throws the exception WrongAge() when the input age = father's age

```
import java.util.*;
class fatherAgeException extends Exception
{ public String toString()
  { return("Father's age is less than 0")
  }
}
class sonAgeException extends Exception
{ int a;
  sonAgeException (int age)
  { a = age;
  }
  Public String toString()
{ if (a<0)
  return ("Son's age is less than 0"
else
  return ("Son's age is more than or equal
          to father's age");
}
}
```

10) Write a program that creates a user interface to perform integer divisions. The user enters two numbers in the text fields, Num1 and Num2. The division of Num1 and Num2 is displayed in the Result field when the divide button is clicked. If Num1 or Num2 were not an integer, the program would throw a NumberFormatException. If Num2 were zero, the program would throw an ArithmeticException. Display the exception in a message dialog box.
